Zeon Stewart

Cloud Engineer · Azure specialization · Full-stack capable

Brooklyn, NY · zeonstewart23@gmail.com · 678-665-1827

LinkedIn · GitHub · Live Azure build tracker

Professional Summary

Cloud engineer with four years of consulting experience at ThoughtWorks, delivering infrastructure, backend and full-stack work across Google Cloud Platform (GCP), Microsoft Azure and Amazon Web Services (AWS). Led with infrastructure as code, Kubernetes platform engineering and developer self-service tooling, and can ship application code in Python, Go, Java and TypeScript when a project needs it.

Having worked across all three major clouds, I am now specializing in Azure. I am building a public series of hands-on Azure personal projects, each automated with Terraform, Bash or Python, proven with a verify script, torn down, and documented with a README, screenshots and a recorded walkthrough.

Technical Skills

- **Cloud platforms:** Microsoft Azure (current specialization), Google Cloud Platform, Amazon Web Services
- **Azure:** Blob Storage static hosting, virtual networks and network security groups, Azure SQL, Key Vault, Microsoft Entra ID, Azure Policy, budgets and role-based access control (RBAC), Azure SDK for Python
- **GCP:** Google Kubernetes Engine (GKE), Cloud Run, Cloud SQL, Pub/Sub, Secret Manager, Vertex AI
- **Infrastructure and delivery:** Terraform, Kubernetes, Helm, Kustomize, GitHub Actions, Backstage.io, Bash
- **Backend:** Python (FastAPI, Celery, SQLAlchemy), Go, Java, Node.js, PostgreSQL, Redis
- **Frontend:** React, Next.js, TypeScript, Angular, Material UI
- **AI integration:** Claude API, OpenAI API, retrieval-augmented generation (RAG), LangGraph

Professional Experience

Consultant, ThoughtWorks · May 2022 – February 2026

Multi-tenant Kubernetes migration, preventative healthcare company

- Migrated a multi-tenant healthcare platform to Kubernetes, sequencing the work as identity and access management (IAM), then networking, then monitoring to reduce risk at each stage.
- Built modular Terraform and Helm code so tenant environments could be provisioned consistently and repeatedly.
- Delivered self-service Kubernetes provisioning through Backstage.io: Scaffolder templates, software catalog registration, and Terraform, Helm and Kustomize behind the scenes.

GCP migration assessment tool, enterprise client

- Built a Go-based tool that automates Google Cloud migration assessments by wrapping Google's migration discovery and fit-assessment tooling.
- Turned a manual, multi-step assessment process into a repeatable workflow for migration planning.

Recommendation system, pet healthcare pharmaceutical company

- Developed a metadata recommendation system in Python and FastAPI using retrieval-augmented generation (RAG) with OpenAI models.

Government web portals, State of Illinois and State of Colorado

- Built features for public-facing state government portals in Java and Angular across two separate engagements.

Azure Personal Projects

A public series of hands-on Azure personal projects. Each one is built, proven with a verify script that includes a check that must fail on purpose, torn down, and published with a README, screenshots and a recorded walkthrough. Progress is tracked live on the build tracker and every project has its own GitHub repository.

- **Static website on Azure Blob Storage** (complete): hosted and automated with Bash scripts. The same site now serves the live build tracker.
- **Two-tier network** (complete): virtual network, subnets and network security groups, automated in Python with the Azure SDK.
- **Managed SQL and Key Vault** (complete): an application reads its database secret from Key Vault using Entra sign-in instead of stored passwords.
- **Terraform network** (complete): the network rebuilt as Terraform infrastructure as code.

- **Governance controls** (complete): Azure Policy that blocks oversized virtual machines, a budget alert, a read-only role assignment and a test user in Microsoft Entra ID, with verify and teardown scripts.
- **Next:** the series continues with a Terraform pipeline, an AWS to Azure migration, security, containers and Kubernetes (AKS), image pipelines and a data platform.

Military Service

Nuclear Machinist's Mate, U.S. Navy (submarines) · 2016 – 2020

- Operated and maintained nuclear propulsion plant systems under strict procedural and safety discipline, which shapes how I approach reliability and systems thinking in cloud work.

Certifications and Education

- Google Cloud Professional Cloud Architect (expired)
- Google Cloud Associate certification (expired)
- Flatiron School, software engineering bootcamp, 2022
- U.S. Navy Nuclear Power training program
